## Overview

There are two types of blocks with diamond information from Cutwise that can be embedded in website pages, web systems and platforms or online-presentations.

1. [Cutwise Widget](#) shows all captured videos and photos along with Optical Performance Scores
2. [Comparison Widget](#) allows you to compare a diamonds.
3. [Cutwise Player](#) shows one pre-selected video/image from ViBox or DiBox

 **Only diamonds published on Cutwise can be shown in Cutwise Widget (status is set to Widget, Cutwise Search or Full Access).**

## Embed a Cutwise Widget

This section explains how to embed a Cutwise Widget in your application and also defines the parameters that are available in the Cutwise Widget.

By appending parameters to the iFrame URL, you can customize the view and playback experience in your application. For example, you can choose one of predefined templates for product view.

Embed a Cutwise Widget using an `<iframe>` tag. Define an `<iframe>` tag in your application in which the src URL specifies the content that the widget will load as well as any other widget parameters you want to set. The `<iframe>` tag's **width** and **height** parameters specify the dimensions of the widget. We recommend to set width and height as set in the Predefined Templates table below.

**Widget Embedding template**

```
<iframe
  name="Cutwise Widget"
  width="{WIDGET_WIDTH}"
  height="{WIDGET_HEIGHT}"
  frameborder="0"
  src="https://widget.cutwise.com/{TEMPLATE_NAME}/v1/{CUTWISE_ID}?autoplay={AUTOPLAY}"
  allowfullscreen
></iframe>
```

## Parameters

| Parameter name | Available values | Default | Example                                                  | Description                                                                                                                                                                                                                                                               |
|----------------|------------------|---------|----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CUTWISE_ID     |                  | —       | https://widget.cutwise.com/performance/v1/333?autoplay=1 | Product ID to embed. You can see it in cutwise diamond page URL: <a href="https://cutwise/diamond/333">https://cutwise/diamond/ 333</a><br>Link for embedding = <a href="https://widget.cutwise.com/performance/v1/333">https://widget.cutwise.com/performance/v1/333</a> |
| AUTOPLAY       | 1, 0             | 1       | ...&autoplay=1&...                                       | This parameter specifies whether the initial video will automatically start to play when the player loads.                                                                                                                                                                |

|      |                           |                                                                                                |                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

### Embed a Cutwise Video Player

This section explains how to embed a Cutwise Video Player in your application and also defines the parameters that are available in the Video Player.

By appending parameters to the IFrame URL, you can customize the playback experience in your application. For example, you can automatically play videos using the AUTOPLAY parameter or choose a media type using the SETUP\_PRESET\_ID parameter. This page currently defines all parameters supported in Cutwise player.

Embed a Cutwise player using an <iframe> tag. Define an <iframe> tag in your application in which the src URL specifies the content that the player will load as well as any other player parameters you want to set. The <iframe> tag's width and height parameters specify the dimensions of the player. We recommend choosing a similar value for width and height parameters and MEDIA\_SIZE parameter.

Example:

### Widget Embedding template

```
<iframe
  name="Cutwise Player"
  width="{MEDIA_SIZE}"
  height="{MEDIA_SIZE}"
  frameborder="0"
  src="https://widget.cutwise.com/video/{CUTWISE_ID}?sp={SETUP_PRESET_ID}&autoplay={AUTOPLAY}"
  allowfullscreen
></iframe>
```

Example without optional parameters:

### Correct widget code example

```
<iframe
  name="Cutwise Player"
  width="480"
  height="480"
  frameborder="0"
  src="https://widget.cutwise.com/video/333"
  allowfullscreen
></iframe>
```

Live demo example:

<http://files-cdn.cutwise.com/widget/video-demo-1/index.html>

Code for this demo example:

### Correct widget code example

```
<iframe
  name="Cutwise Player"
  width="640"
  height="640"
  frameborder="0"
  src="https://widget.cutwise.com/video/333?sp=51&autoplay=1"
  allowfullscreen
></iframe>
```

## Parameters

| Parameter name | Available values | Default | Example                                                                                 | Description                                                                                                                                                                                                                                                    |
|----------------|------------------|---------|-----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CUTWISE_ID     |                  | —       | <a href="https://widget.cutwise.com/video/333">https://widget.cutwise.com/video/333</a> | Cutwise Product ID to embed. You can see it in cutwise diamond page URL: <a href="https://cutwise/diamond/333">https://cutwise/diamond/333</a><br>Link for embedding = <a href="https://widget.cutwise.com/video/333">https://widget.cutwise.com/video/333</a> |
