

Section 2. Details about Share Access

On this page:

1. [What can be manage?](#)
2. [Changing statuses over multiple products or projects](#)
 - 2.1. [Change Permissions from Back Office Page](#)
 - 2.2. [Change Products Permissions from Collections](#)
3. [Share Access](#)
 - 3.1. [Global Access for Products](#)
 - [General Access](#)
 - [Cut Data Statuses](#)
 - 3.2. [Global Access for HPC Projects](#)
 - 3.3. [Private Access](#)

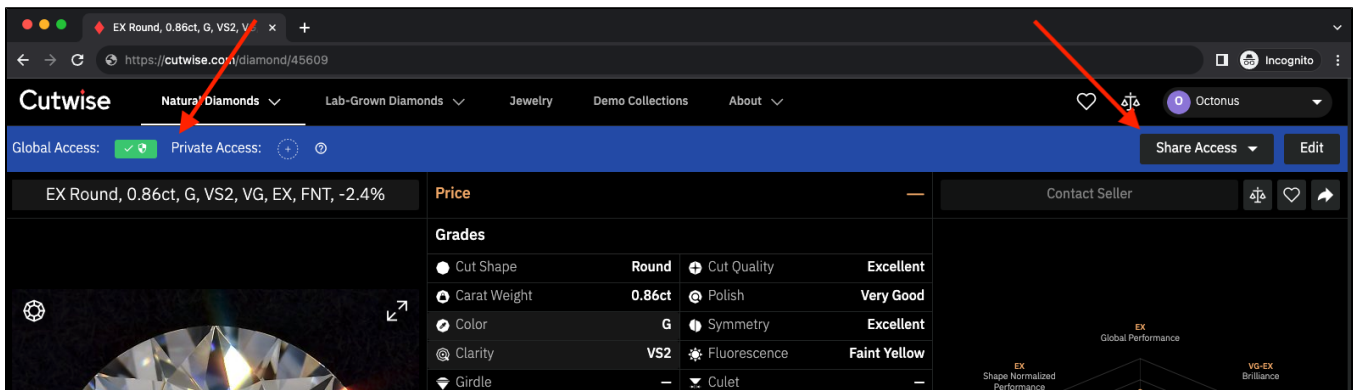

The Access Management system is aiming to make your interaction with the customers more flexible and comfortable.

1. What can be manage?

Currently you can grant permissions for:

- **Products.** Permissions for diamonds (natural, lgd, photoreal), rough, jewelry.
- **Projects.** Permissions for HP Carbon Projects and solutions, photoreal diamonds and scans in projects.

Management interface is located on the top of product or project page:

2. Changing statuses over multiple products or projects

2.1. Change Permissions from Back Office Page

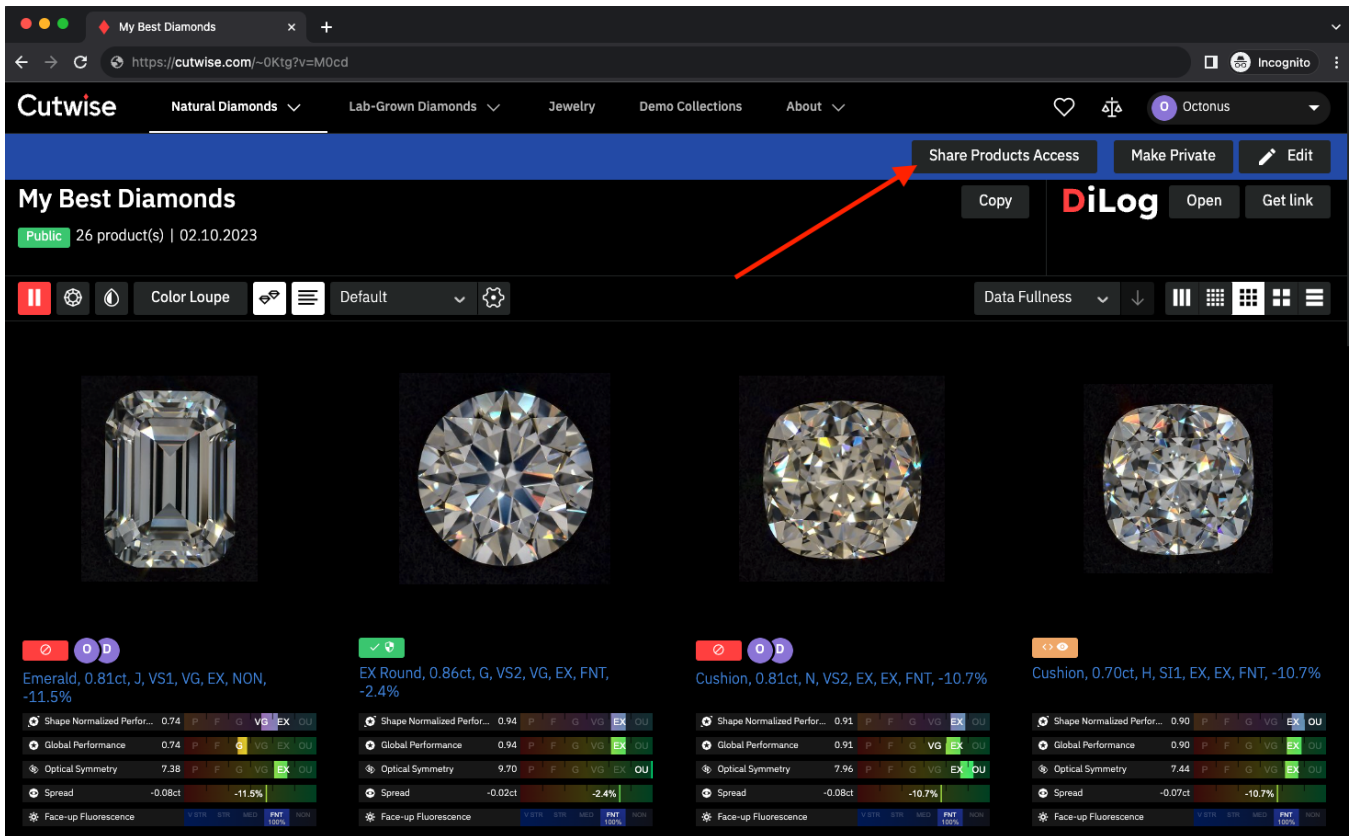

For all your products or projects you can change permissions from Back Office page:

The screenshot shows the Cutwise platform interface. The top navigation bar includes 'Cutwise', 'Natural Diamonds', 'Lab-Grown Diamonds', 'Jewelry', 'Demo Collections', and 'About'. The main header displays 'My Natural Colorless Diamonds' with '27 products' and '32.25 € expenses'. A left sidebar contains filters for Stock Management, Visibility, Basic, Performance, and Additional data. The main table lists diamonds with columns for SKU, Global/Private access, Color, Clarity, Shape, Added, Expenses, Shape Norm. Perf., Global Perf., Fire, Brilliance, O. Symmetry, Spread, Global Access, and Private Access. A red arrow points to the 'Share Access' dropdown menu, which is currently open, showing 'Global' and 'Private' options. The table shows 27 results, with a '27 Results' button and an 'Add to Collection' button at the bottom.

2.2. Change Products Permissions from Collections

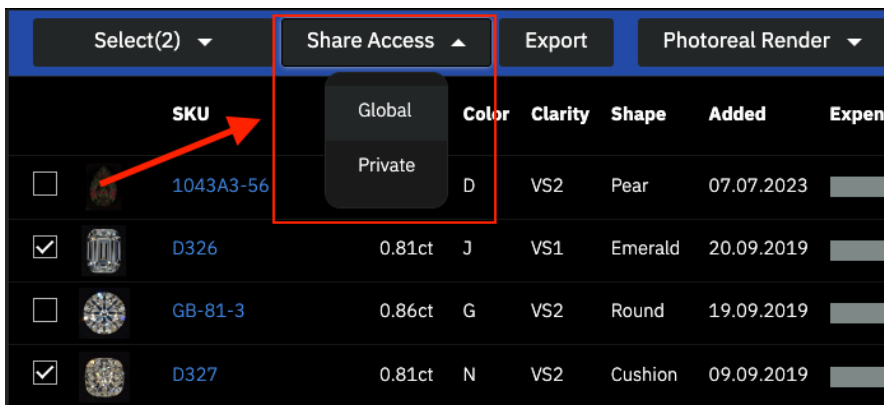

Permissions for products added to collection are managed here (only for which you have the editing permission).

3. Share Access

You can choose whether your product or project should be available to anyone or restricted to only people with access. You can choose one of the **Share Access** function to achieve this:

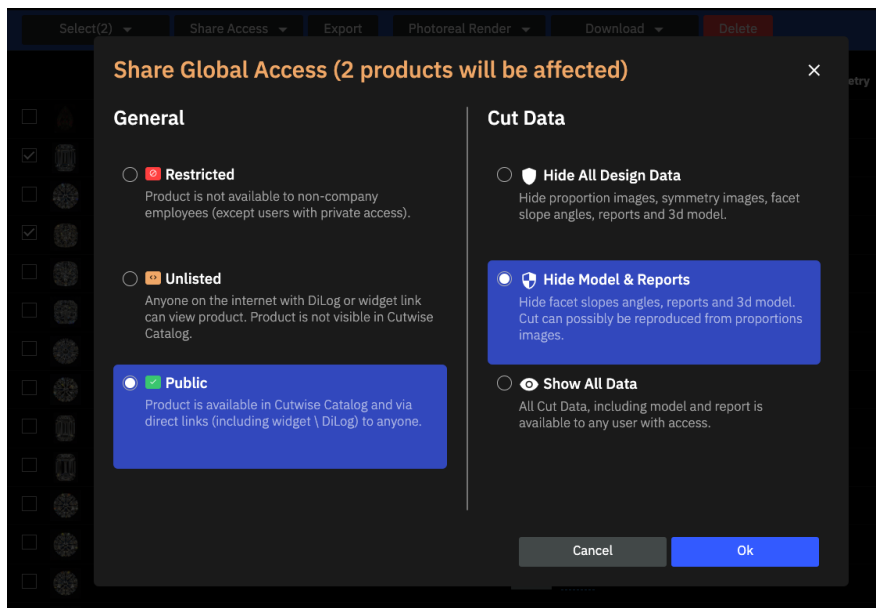

- **Global Access**
- **Private Access**

3.1. Global Access for Products

Global Access for Products, is divided by:

- **General** - general availability of product.
- **Cut Data** - availability of Cut data (3d models, reports, report images with facet angles) for product.

General Access

There are three options to control General Access.

Restricted. Access is denied, for everyone except the employees of company publisher and those who are granted private access.

Unlisted. Access is allowed only with direct link (**DiLog** or **Widget**). Product is not visible in cutwise.com catalog.

Public. Access is allowed in a cutwise.com search and via direct links (including Widget and DiLog) to anyone.

Cut Data Statuses

There are three options to control access to data that can help users to recreate diamond cut design:

Hide All Design Data. Hide proportion images, symmetry images, facet slope angles, reports and 3d model.

Hide Model & Reports. Hide facet slopes angles, reports and 3d model. Cut can possibly be reproduced from proportions images.

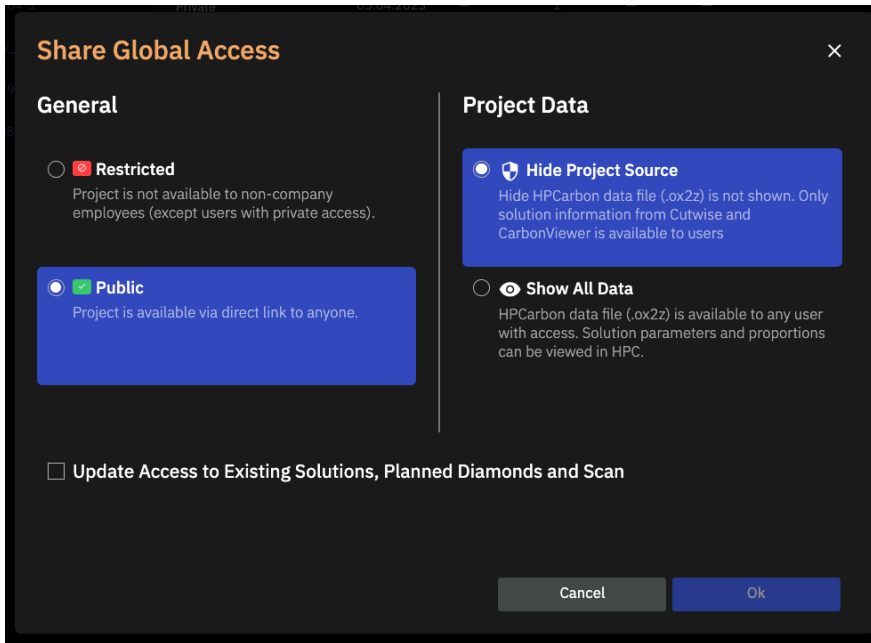

Show All Data. All Cut Data, including model and report is available to any user with access.

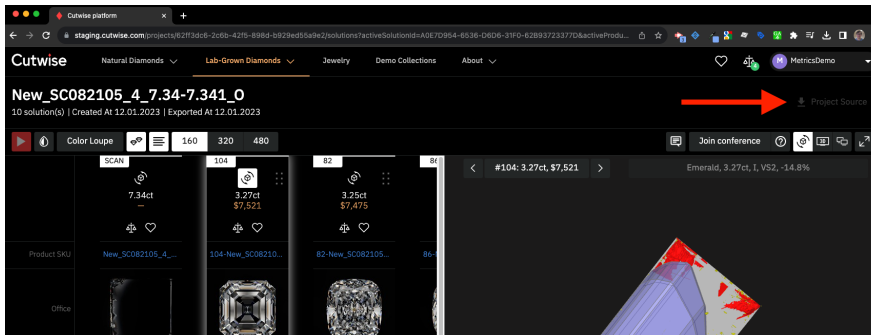

3.2. Global Access for HPC Projects

Global Access for Projects also contains **General** and source **Project Data** access sections:

Hide Project Source hide HP Carbon source file (ox2z).

Access can be simultaneously set for several projects simultaneously.

Your browser does not support the HTML5 video element

Corresponding Global and Cut Data access is set to all scans, diamonds and solutions, information about is shown in Access window.
