August 12th, 2020. Cutwise v.5.3: Release notes

New Features

1. New Version of Cutwise Managing Diamonds Stock API.

Cutwise Diamonds API v4 designed to manage diamond stock, diamonds attributes and certificates.

In this version diamond atributes can be set by string values based on RapNet.

API Documentation:

- API V4 documentation
- Accepted fields and values
- Managing certifications of diamonds

Other Improvements

1. Support HP Oxygen DZ-Lite Color Estimation on Photoreal Rendering.

DZ-Lite estimated color showing on cutwise as:

- New product fields (Table Color and Pavilion Color).
- Generating photoreal photos and videos with DZ-Lite spectrum.

3. The Problem With Receiving DMC File from New HP Oxygen Version was Fixed.

Now we support a new version of DMC file (from HP Oxygen 6.3.29 and higher, HP Carbon 1.0.0 and higher) and uploading on Cutwise ("Upload to Cutwise" feature in HP Oxygen).

All services like OSV Plotting, Spetral Rendering and Basis Recognition are working fine for scan models and allocation plans as well.

Please note that the new DMC file are not available for downloading from product page.

4. Some Improvements for Pair-Comparison Widget.

- Scaled size of comparison video (single scale).
- Mark best and worst value.
- Show LabGrown and Photoreal labels.

Example: https://widget-staging.cutwise.com/pair-comparison/58273/67837

5. Bugfixes.
