How to use DM software without MBox hardware

To use DM software without regular MBox hardware, you'll need to update MicroscopeDrivers.ini in DM distribution.

Providing you have working DM setup with MBox hardware.

Update MicroscopeDrivers.ini for this config. Set BoardCount to 0. Comment or delete all BoardX values in the list. Also delete all "Value" entries in the list below "Board" values.

An example of this below:

MicroscopeDrivers.ini

```
;Microscope Full driver
Device= Engine Microscope
 Table: Main
 BeginData
   Loglevel= Debug
   Version= Union
   BoardCount= 0
   PowerManagement= on
 EndData
 End
EndDevice
```
