Autostop feature

Please study the Galahad Autostop pipeline for precise angle adjustments using the Compass here - [2024-01-12 - HP Carbon 1.11.10#20240112HPCarbon1.11.10-GalahadAutostop](#)

There is video of usage Autostop in Compass:

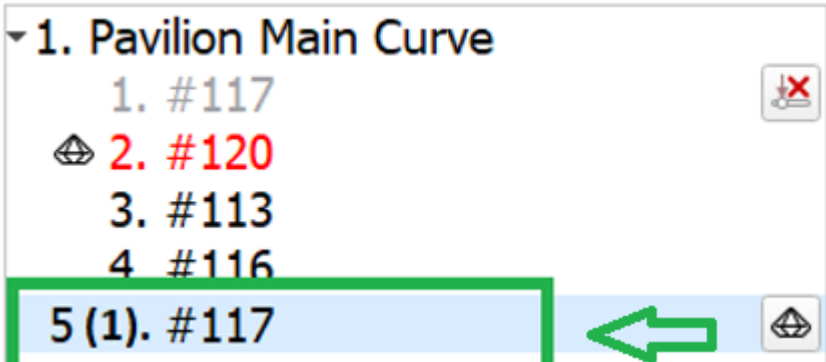

[GC_PLUS_OPERATING.mp4](#)

Auto-stop option is chargeable and available with appropriate HASP license, ask distributor to purchase.

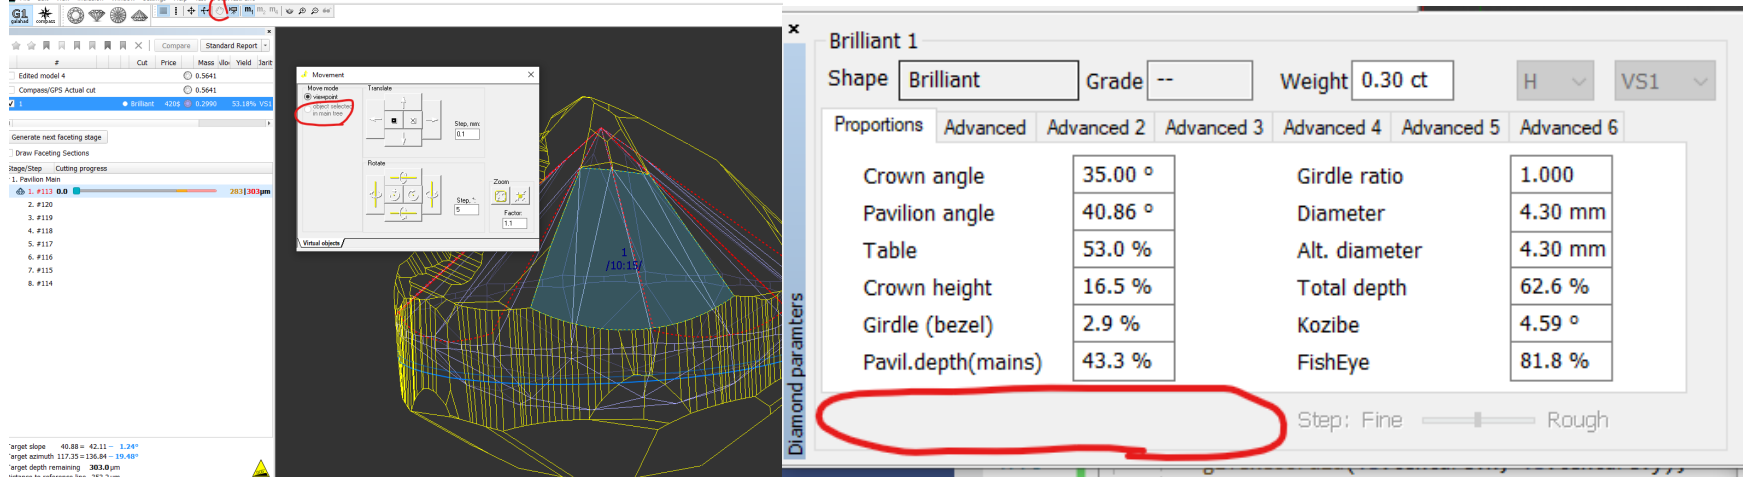

Fixed Problems and Improvements

The following fixes for the known problems and improvements are implemented:

- When facet is done in several steps, each next step is named with reference to the previous step of this facet processing

- blocked URLLR-241 - Generate 15 Pav halves instead of 16
- Disabled ability to move allocated stone by polisher - via Movement panel or by Move toolbar mode, or by changing values in Parameters panel:

- Mass of actual cut is not update after step finishing by one click
