

EDF

What is EDF

EDF stands for Extended Depth of Field. This tools creates images with deeper focused range.

Usual image	EDF Image	HDR EDF Image
		

How to create EDF image

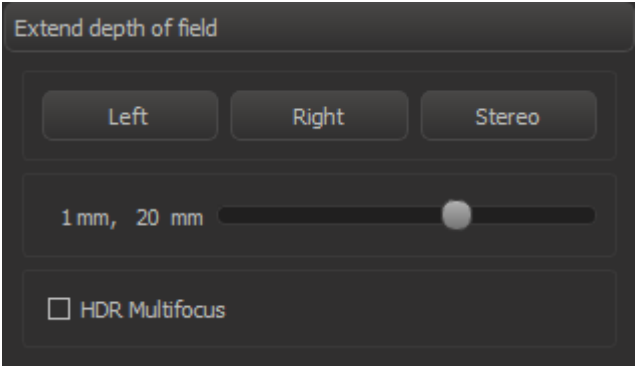

1. In 'Extend Depth of Field' panel ('Processing' tab, right panel), move the slider to select the focused range (note: it depends on current zoom)
2. Press Left / Right / Stereo depending which camera you want to use
3. Focused images will appear in the server data list (left panel).

If you want to use HDR multifocus, check the 'HDR Multifocus' control.

Attention!

HDR takes much more time to create the image.

Incremental Real-Time EDF

EDF can be applied automatically in real-time while the object is still. To do this, enable 'Auto Multifocus' in 'Auto Enhancements' panel ('Processing' tab, right panel).
