2014.12.05 - Helium Polish version 5.6.59.1, BrilRecon.dll version 1.0.25.1

Release contains:

File	Version
HeliimPolish.exe	5.6.59.1
BriRecon.dll	1.0.25.1

In this version we make following changes:

1. We have changed choice of cuttings (filed "cutting") and corresponded reports (filed "reports").
   Now it is following:

Cutting	Default selection	Possible selections
Brilliant	Brilliant	Auto, Brilliant, Princess, Oval, Marquise, Pear, Anyut, Steput, Triangle, Cushion, Radiant, Square Radiant, Square StepCut
P-O-M-H-R	Auto	
StepCut	StepCut	
Cushion	Cushion	
Princess	Princess	
Polish polyhedron	Auto	
Rough polyhedron	Auto	
Sample	Auto	
Asian Star	Brilliant	
Groove Heart	Pear	

So we have deleted unnecessary fields – new princess, Emerald (because when user select now Princess or StepCut then program automatically tries both algorithms and select best one).

2. We made default report for cuttings –so for Princess default is Princess now (but if necessary then operator can change it to another one from list above)

3. We have made run of scanning by short key Ctrl+S.

4. We made some changes to improve building of Cushions.
