

Command Prompt Parameters

Arguments

You can specify one or more file paths as program arguments. Stereo Viewer will open all of these files in different tabs.

Options

In addition to arguments, you can add named options to specify a mode in which your files should be opened. You can specify options in any order.

You have two options to specify command prompt options: in long or in short (if the option supports) recording type.

Using short option name specify option value after symbol '=' or immediately after the option name. Using long option name specify option value only after symbol '='.

 Note, that all options names are case-sensitive.

Long option name	Short option name	Value is optional	Default value	Possible values	Description	Supported
--play		true	true	true, false	The opened files are played immediately	
--stereo		true	false	true, false	The stereo mode enabled for opened files	
--invert		true	false	true, false	Swaps the left and the right images	
--round		true	true	true, false	Loops the movie	
--half		true	true	true, false	Plays only first half the movie	
--split		false		m, s, f, o	<ul style="list-style-type: none">m - Mono image split types - Side by Side image split typef - Frames Shift image split typeo - Over/Under image split type	
--frameshift	-A	false		Any Integer	Integer number of the frame shift	
--fullscreen		true			The last specified file will be opened in fullscreen mode	From 4.8.18.69
--fit-view		true			All files will be opened fitted to their widgets	From 4.8.18.69

Samples

```
"OctoNus Stereo Viewer.exe" C:\movie001.flm --play --half --stereo --invert --split=f -A5
"OctoNus Stereo Viewer.exe" "C:\myStones\mono.mp4" --split=f --frameshift=4 --play
"OctoNus Stereo Viewer.exe" stereo.mp4 --split=s --stereo --half
"OctoNus Stereo Viewer.exe" stereo1.mp4 --split=s stereo2.mp4 --invert (both options there will be applied to both movies)
```
