

How to use DM software with GT1660 cameras

To use DM software with Prosilica GT1660 cameras, you'll need to update MicroscopeDrivers.ini in DM distribution.

Update each cameras section in the MicroscopeDrivers.ini configuration file. Please change **TriggerMode** to **SyncIn2** value.

**Warning!**
For using Prosilica GC1380 cameras you should set **TriggerMode** to **SyncIn1** value for each cameras section

Please don't forget to set **Uniqueld** for your cameras.

An example of this below:

```
; Prosilica GT1660 Left
Device= Photo Microscope
BeginData
Version= Prosilica
Name= Microscope
UniqueId= 139906 // ID for your left camera
...
TriggerMode= SyncIn2
;TriggerMode= SyncIn1 // for Procilica GC1380
...
EndData
EndDevice

; Prosilica GT1660 Right
Device= Photo Microscope
BeginData
Version= Prosilica
Name= Microscope
UniqueId= 139908 // ID for your right camera
...
TriggerMode= SyncIn2
;TriggerMode= SyncIn1 // for Procilica GC1380
...
EndData
EndDevice
```
