

# How to prepare a inclusion demo using OSV 4.3.0 Beta 7

1. Download and install program: Dropbox (OctoNus)\Download\OSV\dm-osv-setup-ver-4.3.0-Beta7.exe
2. Download data from: Dropbox (OctoNus)\GIA\_Project-2016\Presentations\2016-08-15-tomography-demo\ NOTE: Do not forget to download images too, because they contain a new recognized basis.
3. Open OSV 4.3.0 Beta7
4. Open file project via **File->Open project...**
5. Select one of the projects from data folder:
  - a. Data plotted by 4 photosets simultaneously are named like SL+Black\_PaperPRJ-4-sets.msapri
  - b. Data plotted by 1 photoset are named like SL+Black\_PaperPRJ-1-set.msapri
6. Double-click on model in Services list:

7. The data will be opened in a tab. Then let's tune the right renderer on the right panel - select **Model+precise inclusions**:

8. To tune the RI and inclusion color and refractions count, select the layer of inclusions on the right panel:

9. Tune RI to **1.68**, inclusion color (click on red panel and pick color), the number of reflection count

10. Enable Stereo and Full screen.  
11. To show/hide inclusions click on this checkbox:

For reflection count = 0:

For reflection count = 1:
