

# I3D Mini Views

Interactive 3D Mini Views (I3D Mini Views) represent the selected stone model in 3D as well as the standard Scene does that, but with a number of additional details mapped over the displayed facets. Currently, there are two I3D Mini Views in the system:

- [I3D Mini View](#)
- [Comparative I3D Mini View](#)

On this page:

1

[Legend](#)

2

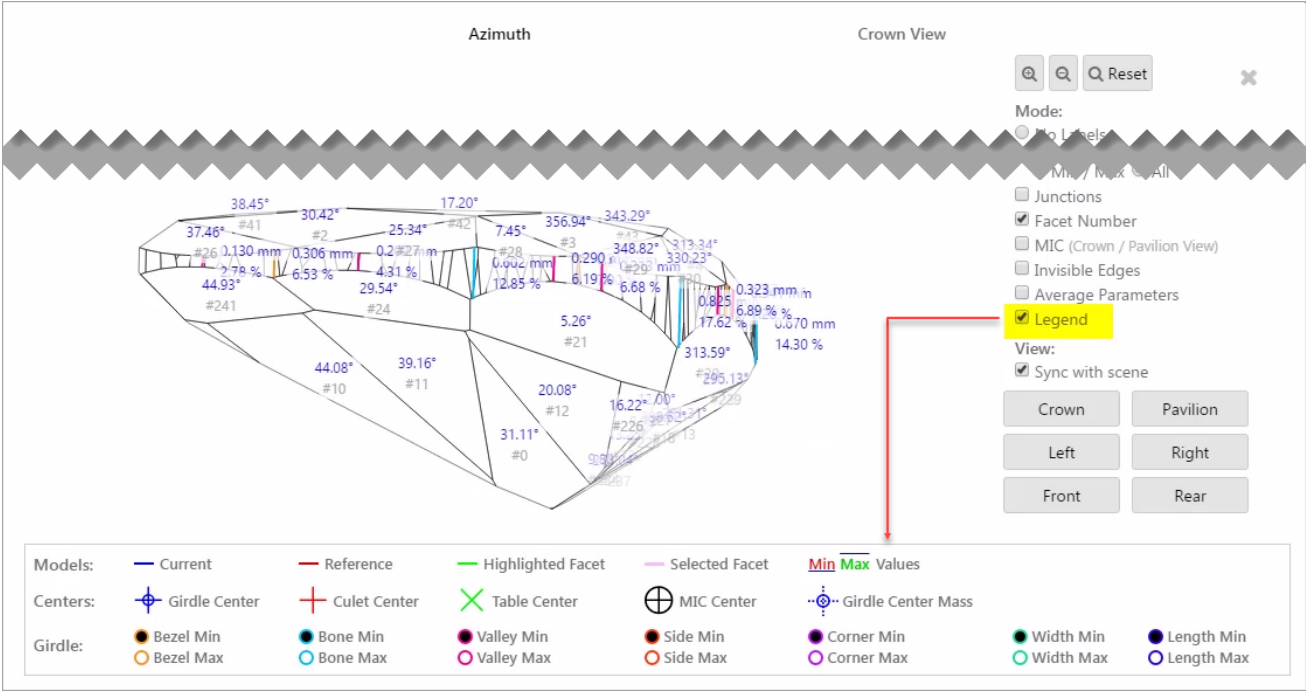

[Square Cuttings - Groups of Girdle Heights](#)

3

[Related Pages](#)

## Legend

In correspondence with how it is done in the [Interactive 3D Report](#), it is possible to show/hide **Legend** in I3D views.

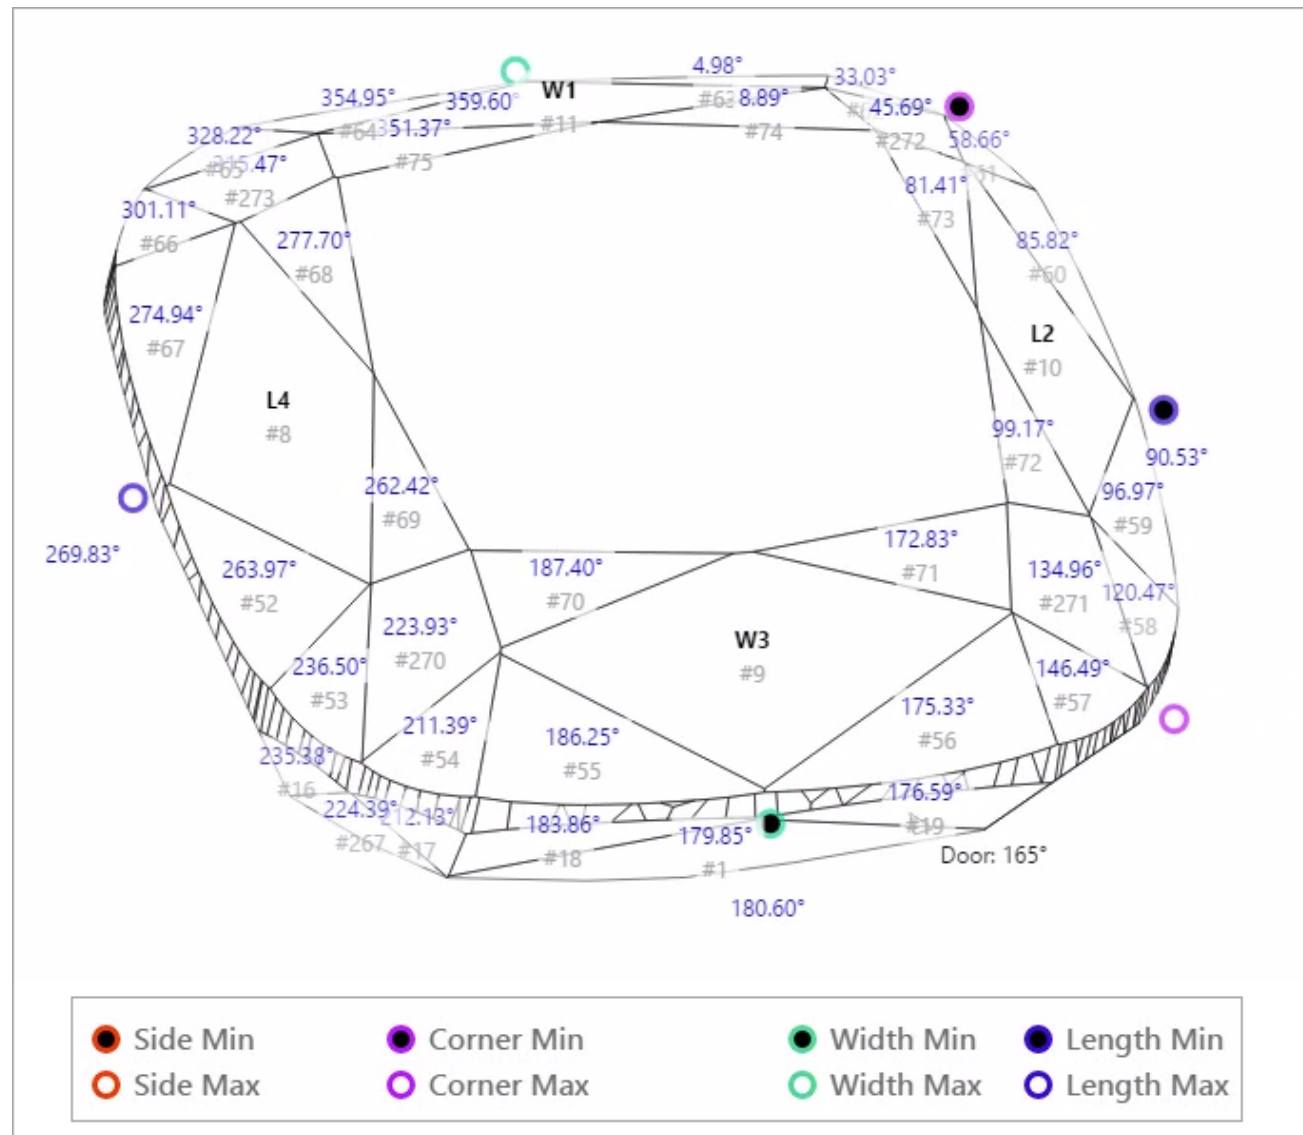

Note that you can select either **Legend** or **Average Parameters** to be displayed - but not both of them at the same time.

## Square Cuttings - Groups of Girdle Heights

For square cuttings, the 4 groups of girdle heights are presented for I3D views (also available in [Interactive 3D Report](#)):

- Side
- Corner
- Width
- Length
